10	Vulnerabilities identified	Trojan-activity
10	Description of the event	On 11 September 2015 at 19:49:11 there was an evil redirector detected from which led to trojan-activity. There was 9 logs lasting 4 minutes 44 seconds. At 19:49:11 there was an evil redirector detected from 104.28.9.93 which injected a script Trojan/JS.Iframe.p. (details as above) At 2015-09-11 19:49:19 19:49:19, there was an outdated flash version as a policy violation detected from 216.245.212.78, the flash version is: 18.0.0.203 x-flash-version: 18,0,0,203\r\n

		At 2015-09-11 19:49:32 19:49:32, there was a possible IP address check detected from 188.165.164.184. This shows that At 2015-09-11 19:49:33 19:49:33, there was Trojan CryptoWall checkin detected from 192.186.222.229. This indicates that the Trojan: CryptoWall plays the major role in this attack. After some research, according to https://www.f-secure.com/v-descs/trojan-w32-cryptowall.shtml , Trojan:W32/Cryptowall is a ransomware that silently encrypts files on the user's machine and demands a ransom to provide the decryption key needed to decrypt the files. It spreads from malicious file attachments to email messages; through downloads of malicious programs from compromised sites; and in the payloads of other malware. Looking deeper into the logs, At 2015-09-11 19:53:55 19:53:55, there an evil redirector detected from 69.49.96.13 which injected a script  . (details as above)
