## PROFESSIONAL SUMMARY

Cloud Computing & Cybersecurity student at Singapore Polytechnic with over 3 years of IT infrastructure experience supporting enterprise and government environments. Experienced in system monitoring, troubleshooting, infrastructure deployments, and technical project coordination. Seeking a 1-year internship commencing March 2027.

## INDUSTRIAL EXPERIENCE

**IT Project Team Lead | Seasonal | Sky & F Pte Ltd | Dec 2025 - Present**

- Lead project teams in managing client communications and manpower allocation for IT infrastructure projects.
- Coordinate issue resolution between engineers and clients to ensure smooth system deployment and operations.
- Successfully completed 2 government projects (IT asset management) within a month while leading a small team of 5-10 IT Project Engineers.

**Senior IT Project Engineer | Contract | Sky & F Pte Ltd | Jun 2024 - Present**

- Mentored junior engineers and supported their technical and professional development.
- Monitored system alerts, provided technical support for client systems including infrastructure deployment and maintenance.
- Assisted in ensuring project deliverables are completed on time and meet service expectations.
- Ensured high availability uptime for major government systems while training and mentoring multiple batches of Junior IT Project Engineers for the company.

**Junior IT Project Engineer | Internship | Sky & F Pte Ltd | Oct 2023 - May 2024**

- Monitored system alerts, provided technical support to ensure system stability for clients.
- Performed hardware troubleshooting including Uninterruptible Power Supply (UPS) replacement and system maintenance.
- Successfully mitigated serious system alerts from government infrastructures that would lead to massive downtimes. Awarded with a Letter of Commendation.

## EDUCATION

**(Currently pursuing) Diploma in Information Technology, Singapore Polytechnic**
Apr 2025 – Apr 2028 | Cumulative GPA: 3.47 | Majoring in Cloud Computing & Cybersecurity

**Higher NITEC in Cyber & Network Security (with Certificate of Merit), Institute of Technical Education (ITE)**
Jan 2022 – Dec 2024 | Cumulative GPA: 3.69

## INDUSTRIAL CERTIFICATIONS AND TRAINING

- EC-Council, Certified Security Specialist
- EC-Council, Certified Secure Computer User
- arcX, Foundation Level Threat Intelligence Analyst
- Amazon Web Services (AWS), Cloud Foundations (Trained)

## TECHNICAL SKILLS

**Cybersecurity:** Network Security, Incident Response, Penetration Testing, Threat Intelligence, OSINT (Open-Source Intelligence), Digital Forensics, Secure Code Review, Vulnerability Assessment, Web Application Security
**Cloud Technologies:** AWS (EC2, RDS, ALB, ASG, VPC, S3, IAM)
**Operating Systems:** Linux (Kali, Debian, Ubuntu, Red Hat, Mint), Windows (10, 11, server 2016, 2019)
**Programming:** JavaScript, Python, SQL, PostgreSQL
**Networking:** TCP/IP, Troubleshooting, Infrastructure Support, Cisco Technologies
**General Tools:** Microsoft Office Tools, Canva, PowerPoint (for reporting & presentations)

## PROJECTS

**Digital Forensics - Security Operations Centre Incident Investigation (Independent Project):**

- Investigated a simulated cyberattack by linking 9 SIEM alerts in Kibana to 5 attacker IP addresses (US and France) and mapping how the malware communicated with its controller.
- Identified the malware families using Wireshark and VirusTotal, and found that an outdated Flash version was how the attacker got in.
- Wrote a response plan covering containment (isolating systems, restoring from backup) and prevention (patching, anti-ransomware tools, disabling Flash).

**Highly Available AWS Cloud Infrastructure for Web Application (Independent Project):**

- Built a web application on AWS that stays online if one data centre fails, using a custom network spread across two Availability Zones.
- Automated server setup with EC2 instances and a startup script and used a load balancer to spread traffic evenly between them.
- Set up auto scaling and CloudWatch monitoring so capacity adjusts to demand and issues are visible early.

**Secure Code Review & Remediation (Group Project):**

- Tested a web application for security weaknesses by reviewing its code and attacking it manually and found 5 high-risk issue types from the OWASP Top 10:2025.
- Showed how an attacker could steal the database contents and user credentials through the search bar (SQL injection), then fixed it so user input can no longer alter database commands.
- Closed cross-site scripting holes that let attackers run malicious code in other users' browsers, by validating input and displaying user content as plain text.
- Secured user accounts by replacing plaintext password storage with bcrypt hashing, migrating existing accounts without locking out users, and moving a hardcoded secret key out of the source code.
